Integrating Neural and Symbolic Reasoning

Antrea Christou, Shreyas Casturi, David Castro, Rose Taylor and Jon Wasky
Advised by Dr. Cogan Shimizu
College of Computer Science and Engineering

Neurosymbolic AI → Using neural models (ML) and symbolic reasoning (ontologies) to improve reasoning and flexibility.

- Structured Knowledge is more important than ever with the rise of AI. Examining how this knowledge is "best" is crucial when training and evaluating these AI models.
- Underlying ontology structure can be key to optimising KGE performances in various ML tasks.
- Reusable and resilient knowledge is essential in a time when data is expanding at a never-before-seen pace.
